Title: - Information Storage Management in Cloud.

Cloud storage is a cloud computing model that stores data on internet through a cloud computing provider who manages and operates data storage as a service. It's delivered on demand with just-in time capacity and costs, and eliminates buying and managing your own data storage infrastructure. In cloud data farms can be utilized as data store units. Data stored in cloud may get tampered or unused data might be removed by Cloud Service Provider. A security management solution is designed for our data while it is travelling from off—chain stage to on-chain to track tampering and accessing of data with the help of Blockchain. Hence to secure our data online, Blockchain Technology can be used to protect our digital valuables. Outcome of this work is to solve Cloud security challenges and sources of threats and how they can be resolved by the support of Blockchain.
