

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**

*(Established by an Act No.30 of 2008 of A.P. State Legislature)*

**Kukatpally, Hyderabad – 500 085, Telangana State (India)**

**M. TECH – ELECTRICAL POWER ENGINEERING**

**((Applicable for the Batch admitted from the Academic Year 2021-22 onwards))**

**(R21) COURSE STRUCTURE AND SYLLABUS**

I Semester			L	T	P	Credits
Sr.No	Core/Elective	Course Name				
1.	PC 1	Advanced Power System Analysis	3	0	0	3
2.	PC 2	Economic Operation of Power Systems	3	0	0	3
3.	PE I	1. HVDC Transmission 2. Renewable Energy Technologies 3. Smart Grid Technologies 4. Modern Control Theory	3	0	0	3
4.	PE II	1. Electrical Power Distribution System 2. Reactive Power Compensation and Management 3. Mathematical Methods for Power Engineering 4. Hybrid Electric Vehicles and Design	3	0	0	3
5.	Laboratory 1	Power Systems Computation Lab-I	0	0	4	2
6.	Laboratory 2	Advanced Power Systems Lab	0	0	4	2
7.	MLC	Research Methodology & IPR	2	0	0	2
8.	Audit I	Audit I	2	0	0	0
<b>Total Credits</b>						<b>18</b>

II Semester			L	T	P	Credits
Sr.No	Core/Elective	Course Name				
1.	PC 3	Digital Protection of Power System	3	0	0	3
2.	PC 4	Power System Dynamics	3	0	0	3
3.	PE III	1. Restructured Power Systems 2. EHV AC Transmission 3. Swarm Intelligence Techniques in Power Systems 4. Industrial Load Modelling and Control	3	0	0	3
4.	PE IV	1. AI Techniques in Power Systems 2. Power Quality Improvement Techniques 3. Power Apparatus Design 4. Power System Reliability and Planning	3	0	0	3
5.	Laboratory 3	Power Systems Computation Lab-II	0	0	4	2
6.	Laboratory 4	Power System Protection Lab	0	0	4	2
7.	MPWS	Mini Project with Seminar	0	0	4	2
8.	Audit-II	Audit II	2	0	0	0
<b>Total Credits</b>						<b>18</b>

III Semester			L	T	P	Credits
Sr.No	Core/Elective	Course Name				
1.	PE V	1. Power System Transients 2. Flexible AC Transmission Systems 3. Gas Insulated Systems 4. SCADA System and Applications	3	0	0	3
2.	OEC	1. Business Analytics 2. Industrial Safety 3. Operations Research 4. Cost Management of Engineering Projects 5. Composite Materials 6. Photovoltaic Systems	3	0	0	3
3.	PW	PROJECT/ DISSERTATION PHASE - I	0	0	20	10
<b>Total Credits</b>						<b>16</b>

IV Semester			L	T	P	Credits
Sr.No	Core/Elective	Course Name				
1.	PW	PROJECT/ DISSERTATION PHASE - II	0	0	32	16
<b>Total Credits</b>						<b>16</b>

**Total Credits : 68**

#### Open Elective

1. Business Analytics (Offered by CSE Department)
2. Industrial Safety (Offered by **Chemical Engineering** Department)
3. Operations Research (Offered by **Mechanical Engineering** Department)
4. Cost Management of Engineering Projects (Offered by **Civil Engineering** Department)
5. Composite Materials (Offered by **Metallurgical Engineering** Department)
6. Photovoltaic Systems (Offered by **EEE** Department)

#### Audit Course I & II

1. English for Research Paper Writing.
2. Disaster Management.
3. Sanskrit for Technical Knowledge.
4. Value Education.
5. Constitution of India.
6. Pedagogy Studies.
7. Stress Management by Yoga.
8. Personality Development through Life Enlightenment Skills.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD****M. Tech – I Semester**

L	T	P	C

**ADVANCED POWER SYSTEM ANALYSIS  
(PC 1)**

**Prerequisite:** Computer Methods in Power Systems**Course Objectives:**

- To build the Nodal admittance and Nodal impedance matrices of a practical network.
- To study various methods of load flow and their advantages and disadvantages.
- To understand how to analyze various types of faults in power system.
- To understand power system security concepts and study the methods to rank the contingencies.
- To understand need of state estimation and study simple algorithms for state estimation.

**Course Outcomes:** After completion of the course, students will be able to:

- Build/construct  $Y_{BUS}$  and  $Z_{BUS}$  of any practical network.
- Calculate voltage phasors at all buses, given the data using various methods of load flow.
- Calculate fault currents in each phase.
- Rank various contingencies according to their severity.
- Estimate the bus voltage phasors given various quantities viz. power flow, voltages, taps, CB status etc.

**UNIT-I:****NETWORK MATRICES**Introduction, Bus Admittance Matrix, Network Solution, Network Reduction(Kron Reduction),  $Y_{BUS}$  structure and manipulation, Bus Impedance matrix, Methods to determine columns of  $Z_{BUS}$ .**UNIT-II:****LOAD FLOW STUDIES**Overview of Gauss-Siedel, Newton-Raphson, Fast decoupled load flow methods, Convergence properties, Sparsity techniques, Handling  $Q_{max}$  violations in constant matrix, Inclusion in frequency effects, AVR in load flow, Handling of discrete variable in load flow.**UNIT-III:****FAULT CALCULATIONS**Symmetrical faults, Fault calculations using  $Z_{BUS}$ , Equivalent circuits, Selection of circuit breakers, Unsymmetrical faults, Problems on various types of faults.**UNIT-IV:****CONTINGENCY ANALYSIS**

Security Analysis: Security state diagram, Contingency analysis, Generator shift distribution factors, Line outage distribution factor, Multiple line outages, Overload index ranking.

**UNIT-V:****STATE ESTIMATION**

Sources of errors in measurements, Virtual and Pseudo measurements, Observability concepts, Tracking state Estimation, Weighted Least Square method, Bad Data detection and estimation.

**TEXT BOOKS:**

1. J.J. Grainger & W.D. Stevenson, "Power system analysis", McGraw Hill, 2003.
2. A. R. Bergen & Vijay Vittal, "Power System Analysis", Pearson, 2000.

**REFERENCES:**

**ECONOMIC OPERATION OF POWER SYSTEMS  
(PC 2)**

**Prerequisite:** Electrical Power Systems**Course Objectives:**

- To formulate and derive the necessary conditions for economical load scheduling problem.
- To understand various constraints, problem formulation and methods to solve the unit commitment problem.
- To understand the constraints related to hydel power plants, problem formulation and solution techniques for hydro-thermal scheduling problem.
- To understand the necessity, factors governing the frequency control and analyze the uncontrolled and controlled LFC system.
- To understand the basic difference between ELS and OPF problem, formulation of the OPF problem and solution techniques.

**Course Outcomes:** After completion of the course, students will be able to:

- Solve the economic load scheduling with and without network losses both in classical method and iterative methods.
- Solve the unit commitment problem using priority-list method and forward-dynamic method.
- Solve hydro-thermal scheduling problem for short-term and long-term range.
- Analyze the single area and two area systems for frequency deviation under sudden change in load.
- Solve the OPF problem using AC and DC load flow methods.

**UNIT-I:****ECONOMIC LOAD SCHEDULING**

Characteristics of Steam Turbine, Variations in steam unit characteristics, Economic dispatch with piecewise linear cost functions, Lambda Iterative method, LP method, Economic dispatch under composite generation production cost function, Base point and Participation factors, Thermal system Dispatching with Network losses considered.

**UNIT-II:****UNIT COMMITMENT**

Unit Commitment: Definition, Constraints in Unit Commitment, Unit Commitment solution methods, Priority-List Methods, Dynamic Programming Solution.

**UNIT-III:****HYDRO THERMAL SCHEDULING**

Characteristics of Hydroelectric units, Introduction to Hydrothermal coordination, Long-Range and Short-Range Hydro-Scheduling, Hydroelectric plant models, Hydrothermal scheduling with storage limitations, Dynamic programming solution to hydrothermal scheduling.

**UNIT-IV:****LOAD FREQUENCY CONTROL**

Control of generation, Models of power system elements, Single area and two area block diagrams, Generation control with PID controllers, Implementation of Automatic Generation control (AGC) and its features.

**UNIT-V:****OPTIMAL POWER FLOW**

Introduction to Optimal power flow problem, OPF calculations combining economic dispatch and power flow, OPF using DC power flow, Algorithms for solution of the ACOPF, Optimal Reactive Power Dispatch.

**TEXT BOOKS:**

1. J.J. Grainger & W.D.Stevenson, "Power system analysis", McGraw Hill, 2003.

3	0	0	3

**HVDC TRANSMISSION****(PE I.1)****Prerequisite:** Power Systems and Power Electronics**Course Objectives:**

- To understand the state of the art HVDC technology.
- To learn the methods to carry out modeling and analysis of HVDC system frontier-area power flow regulation.

**Course Outcomes:** After completion of the course, students will be able to:

- Expose to the basics of HVDC technology.
- Gain Knowledge of modelling and analysis of HVDC system for inter-area power flow regulation.
- Analyze the converter and dc grid faults and methods to mitigate them.
- Understand the HVDC converter reactive power requirements and identifying the necessary means to address those issues.

**UNIT-I:****GENERAL ASPECTS OF DC TRANSMISSION**

Evolution of HVDC transmission, Comparison of HVDC and HVAC systems, Types of DC links, Components of a HVDC system, Valve characteristics, Properties of converter circuits, Assumptions, Single phase and Three-phase Converters, Pulse number, Choice of best circuit for HVDC converters.

**UNIT-II:****ANALYSIS OF BRIDGE CONVERTER**

Analysis of simple rectifier circuits, Required features of rectification circuits for HVDC transmission.

**Analysis of HVDC converter:** Different modes of converter operation, Output voltage waveforms and DC voltage in rectification, Output voltage waveforms and DC in inverter operation, Thyristor/Valve voltages, Equivalent electrical circuit.

**UNIT-III:****DC LINK CONTROL**

Grid control, Basic means of control, Power reversal, Limitations of manual control, Constant current versus Constant Voltage, Desired features of control.

**Actual control characteristics:** Constant-minimum-ignition-angle control, Constant-current control, Constant-extinction-angle control, Stability of control, Tap-changer control, Power control and current limits, Frequency control.

**UNIT-IV:****CONVERTER FAULTS & PROTECTION**

Converter mal-operations, Commutation failure, Starting and shutting down the converter bridge, Converter protection.

**UNIT-V:****REACTIVE POWER MANAGEMENT & AC-DC POWER FLOW ANALYSIS**

Smoothing reactor and DC Lines, Reactive power requirements, Harmonic analysis, Filter design.

Power flow Analysis in AC/DC systems, Modelling of DC links, Solutions of AC-DC Power flow.

**TEXT BOOKS:**

1. J. Arrillaga, "High Voltage Direct Transmission", Peter Peregrinus Ltd. London, 1983.
2. K. R. Padiyar, "HVDC Power Transmission Systems", Wiley Eastern Ltd., 1990.

**M. Tech – I Semester**

**L T P C**  
**3 0 0 3**

**RENEWABLE ENERGY TECHNOLOGIES**  
**(PE I.2)**

**Prerequisite:** Power Systems and Electrical Machines

**Course Objectives:**

- To learn various renewable energy sources
- To gain understanding of integrated operation of renewable energy sources
- To understand Power Electronics Interface with the Grid.

**Course Outcomes:** After completion of the course, students will be able to:

- Gain knowledge about renewable energy
- Understand the working of distributed generation system in autonomous/grid connected modes

**UNIT- I:**

**SOLAR ENERGY SYSTEMS:**

Introduction to solar radiation, Solar thermal energy conversion, Flat plate collector, Concentric collectors, Solar pond, Central receiver system, Solar pumping, Solar photovoltaic systems, Characteristics of PV cell, Photo voltaic modules, Types of Photo voltaic systems.

**UNIT-II:**

**WIND ENERGY AND BIO GAS:**

Basics of wind energy, Classification of turbines, Wind characteristics, Energy extraction, Betz limit, Modes of wind power generation.

Bio Mass energy conversion, Anaerobic Digestion, Aerobic Digestion, Gasification, Bio Gas Plants.

**UNIT-III:**

**OCEAN ENERGY CONVERSION:**

Tidal Energy generation, Characteristics of Tides, Power generation schemes, Components in Tidal power plant.

Wave Energy: Principle of wave energy plant, Wave energy conversion machines.

Ocean Thermal Energy conversion: Principle, Cycles of operation, Types of OTEC plants , Applications.

**UNIT-IV:**

**GEO-THERMAL ENERGY AND FUEL CELLS:**

**HYBRID ENERGY SYSTEMS:**

Geothermal Energy: Structure of Earth's interior, Geothermal fields, Gradient, Resources, Geothermal power generation.

Fuel cells: Introduction, Principle of operation, Types of Fuel cells, State of art fuel cells, Energy output of a fuel cell, Operating characteristics of fuel cells, Thermal efficiency, Need for Hybrid systems, Types of Hybrid systems.

**UNIT-V:**

**ENERGY SYSTEMS AND GRIDS**

Introduction, Energy systems, Distribution technologies, Energy storage for grid electricity, Social and environmental aspects of energy supply and storage.

Electricity grids (networks), DC grids, Special challenges and opportunities for renewable electricity, Power Electronic Interface with the Grid.

**TEXT BOOKS:**

1. D.P.Kothari, K.C.Singal, R.Ranjan, “Renewable Energy Resources and emerging technologies”, PHI 2<sup>nd</sup> Edition, 2011.

**SMART GRID TECHNOLOGIES**  
(PE I.3)

**Prerequisite:** Power Systems**Course Objectives:**

- To understand concept of smart grid and its advantages over conventional grid
- To know smart metering techniques
- To learn wide area measurement techniques
- To understand the problems associated with integration of distributed generation & its solution through smart grid.

**Course Outcomes:** After completion of the course, students will be able to:

- Appreciate the difference between smart grid & conventional grid
- Apply smart metering concepts to industrial and commercial installations
- Formulate solutions in the areas of smart substations, distributed generation and wide area measurements
- Come up with smart grid solutions using modern communication technologies

**UNIT-I:**

Introduction to Smart Grid, Evolution of Electric Grid, Concept of Smart Grid, Definitions, Need of Smart Grid, Concept of Robust & Self Healing Grid Present development & International policies in Smart Grid

**UNIT-II:**

Introduction to Smart Meters, Real Time Pricing, Smart Appliances, Automatic Meter Reading (AMR), Outage Management System (OMS), Plug in Hybrid Electric Vehicles (PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation, Smart Substations, Substation Automation, Feeder Automation .

**UNIT-III:**

Geographic Information System (GIS), Intelligent Electronic Devices (IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage, Wide Area Measurement System (WAMS), Phase Measurement Unit (PMU).

**UNIT-IV:**

Concept of micro-grid, Need & applications of micro-grid, Formation of micro-grid, Issues of interconnection, Protection & control of micro-grid, Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators, Fuel-cells, micro-turbines, Captive power plants, Integration of renewable energy sources.

**UNIT-V:**

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit. Advanced Metering Infrastructure (AMI) and Various Communication means and IP based Protocols.

**TEXT BOOKS:**

1. Ali Keyhani, "Design of smart power grid renewable energy systems", Wiley IEEE, 2011.
2. Clark W. Gellings, "The Smart Grid: Enabling Energy Efficiency and Demand Response", CRC Press , 2009.

**MODERN CONTROL THEORY  
(PE I.4)**

**Prerequisite:** Control Systems**Course Objectives:**

- To explain the basics of modern control system for the real time analysis and design of control systems.
- To explain the concepts of state variable analysis.
- To study and analyze non linear systems.
- To analyze the concept of stability for nonlinear systems and their categorization.

**Course Outcomes:** After completion of the course, students will be able to:

- Know various terms of modern control system for the real time analysis and design of control systems.
- Perform state variable analysis for any real time system.
- Examine a system for its stability, controllability and observability.
- Implement basic principles and techniques in designing linear control systems.
- Apply knowledge of control theory for practical implementations in engineering and network analysis.

**UNIT I:****MATHEMATICAL PRELIMINARIES AND STATE VARIABLE ANALYSIS**

Fields, Vectors and Vector Spaces, Linear combinations and Bases, Linear Transformations and Matrices, Scalar Product and Norms, Eigen values, Eigen Vectors and a Canonical form representation of Linear systems, The concept of state, State space model of Dynamic systems, Time invariance and Linearity, Non uniqueness of state model, State diagrams for Continuous-Time State models, Existence and Uniqueness of Solutions to Continuous-Time State Equations, Solutions of Linear Time Invariant Continuous-Time State Equations, State transition matrix and its properties.

Complete solution of state space model due to zero input and due to zero state.

**UNIT II:****CONTROLLABILITY AND OBSERVABILITY**

General concept of controllability, Controllability tests, Different state transformations such as diagonalization, Jordan canonical forms and Controllability canonical forms for Continuous-Time Invariant Systems, General concept of Observability, Observability tests for Continuous-Time Invariant Systems, Observability of different State transformation forms.

**UNIT III:****STATE FEEDBACK CONTROLLERS AND OBSERVERS**

State feedback controller design through Pole Assignment using Ackerman's formula

State observers: Full order and Reduced order observers.

**UNIT IV:****NON-LINEAR SYSTEMS**

Introduction to Non Linear Systems, Types of Non-Linearities, Saturation, Dead-Zone, Backlash, Jump Phenomenon etc., Linearization of nonlinear systems, Singular Points and its types, Describing function, Describing function of different types of nonlinear elements, Stability analysis of Non-Linear systems through describing functions.

Introduction to phase-plane analysis, Method of Isoclines for Constructing Trajectories, Stability analysis of nonlinear systems based on phase-plane method.

**UNIT V:****STABILITY ANALYSIS**

Stability in the sense of Lyapunov, Lyapunov's stability and Lyapunov's instability theorems, Stability Analysis of the Linear continuous time invariant systems by Lyapunov second method, Generation of Lyapunov functions, Variable gradient method, Krasooviski's method.

**ELECTRICAL POWER DISTRIBUTION SYSTEM  
(PE II.1)****Prerequisite:** Power Systems**Course Objectives:**

- To learn about power distribution system
- To learn of SCADA system
- To understand distribution automation

**Course Outcomes:** After completion of the course, students will be able to:

- Gain knowledge of power distribution system
- Study the distribution automation and its application in practice
- Learn SCADA system

**UNIT-I:**

Distribution of Power, Management, Power Loads, Load Forecasting Short-term & Long-term, Power System Loading, Technological Forecasting.

**UNIT-II:**

Advantages of Distribution Management System (D.M.S.), Distribution Automation: Definition, Restoration / Reconfiguration of Distribution Network, Different Methods and Constraints, Power Factor Correction.

**UNIT-III:**

Interconnection of Distribution, Control & Communication Systems, Remote Metering, Automatic Meter Reading and its implementation.

SCADA: Introduction, Block Diagram, SCADA Applied To Distribution Automation, Common Functions of SCADA, Advantages of Distribution Automation through SCADA.

**UNIT-IV:**

Calculation of Optimum Number of Switches, Capacitors, Optimum Switching Device Placement in Radial Distribution Systems, Sectionalizing Switches, Types, Benefits, Bellman's Optimality Principle, Remote Terminal Units, Energy efficiency in electrical distribution & Monitoring.

**UNIT-V:**

Maintenance of Automated Distribution Systems, Difficulties in Implementing Distribution, Automation in Actual Practice, Urban/Rural Distribution, Energy Management, AI techniques applied to Distribution Automation.

**TEXT BOOKS:**

1. A.S. Pabla, "Electric Power Distribution", Tata McGraw Hill Publishing Co. Ltd., 4<sup>th</sup> Edition.
2. M.K. Khedkar, G.M. Dhole, "A Text Book of Electrical Power Distribution Automation", University Science Press, New Delhi.

**REACTIVE POWER COMPENSATION AND MANAGEMENT  
(PE II.2)**

**Prerequisite:** Power Systems**Course Objectives:**

- To identify the necessity of reactive power compensation
- To describe load compensation
- To select various types of reactive power compensation in transmission systems
- To illustrate reactive power coordination system
- To characterize distribution side and utility side reactive power management.

**Course Outcomes:** After completion of the course, students will be able to:

- Distinguish the importance of load compensation in symmetrical as well as unsymmetrical loads
- Work out on various compensation methods in transmission lines
- Construct models for reactive power coordination
- Distinguish demand side reactive power management & user side reactive power management

**UNIT-I:****LOAD COMPENSATION**

Objectives and specifications, Reactive power characteristics, Inductive and capacitive approximate biasing, Load compensator as a voltage regulator, Phase balancing and powerfactor correction of unsymmetrical loads, Examples.

**UNIT-II:****STEADY–STATE REACTIVE POWER COMPENSATION IN TRANSMISSION SYSTEMS**

Uncompensated line, Types of compensation, Passive shunt and series and dynamic shunt compensation, Examples.

**TRANSIENT STATE REACTIVE POWER COMPENSATION IN TRANSMISSION SYSTEMS**

Characteristic time periods, Passive shunt compensation, Static compensation, Series capacitor compensation, Compensation using synchronous condenser, Examples.

**UNIT-III:****REACTIVE POWER COORDINATION**

Objective, Mathematical modeling, Operation planning, Transmission benefits, Basic concepts of quality of power supply, Disturbances, Steady–state variations, Effect of undervoltages, Frequency, Harmonics, Radio frequency and electromagnetic interference.

**UNIT-IV:****DEMAND SIDE MANAGEMENT**

Load patterns, Basic methods load shaping, Power tariffs, KVAR based tariffs penalties for voltage flickers and Harmonic voltage levels.

**DISTRIBUTION SIDE REACTIVE POWER MANAGEMENT**

System losses, Loss reduction methods, Examples, Reactive power planning, Objectives, Economics Planning capacitor placement, Retrofitting of capacitor banks.

**UNIT-V:****USER SIDE REACTIVE POWER MANAGEMENT**

KVAR requirements for domestic appliances, Purpose of using capacitors, Selection of capacitors, Deciding factors, Types of available capacitor's, Characteristics and Limitations.

**REACTIVE POWER MANAGEMENT IN ELECTRIC TRACTION SYSTEMS AND ARC FURNACES**

Typical layout of traction systems, Reactive power control requirements, Distribution transformers, Electric arc furnaces, Basic operations, Furnaces transformer, Filter requirements, Remedial measures, Power factor of an arc furnace.

**TEXT BOOKS:**

1. T.J.E.Miller, "Reactive power control in Electric power systems", John Wiley and sons, 1982.

**MATHEMATICAL METHODS FOR POWER ENGINEERING  
(PE II.3)**

**Prerequisite:** Mathematics**Course Objectives:**

- To understand the relevance of mathematical methods to solve engineering problems.
- To understand how to apply these methods for a given engineering problem.

**Course Outcomes:** After completion of the course, students will be able to:

- Gain knowledge about vector spaces, linear transformation, eigenvalues and eigenvectors of linear operators
- Learn about linear programming problems and understanding the simplex method for solving linear programming problems in various fields of science and technology
- Acquire knowledge about nonlinear programming and various techniques used for solving constrained and unconstrained nonlinear programming problems
- Understand the concept of random variables, functions of random variable and their probability distribution
- Understand stochastic processes and their classification

**UNIT-I:**

Vector spaces, Linear transformations, Matrix representation of linear transformation, Eigen values and Eigen vectors of linear operator.

**UNIT-II:**

Linear Programming Problems, Simplex Method, Duality, Non Linear Programming problems.

**UNIT-III:**

Unconstrained Problems, Search methods, Constrained Problems.

**UNIT-IV:**

Lagrange method, Kuhn-Tucker conditions, Random Variables, Distributions.

**UNIT-V:**

Independent Random Variables, Marginal and Conditional distributions, Elements of stochastic processes.

**TEXT BOOKS:**

1. Kenneth Hoffman and Ray Kunze, "Linear Algebra", 2<sup>nd</sup> Edition, PHI, 1992.

**HYBRID ELECTRIC VEHICLES AND DESIGN  
(PE II.4)**

**Prerequisite:** Power Semiconductor Drives, Electrical Drives and Control, Utilization of Electric Energy

**Course Objectives:**

- To understand the fundamental concepts, principles, analysis and design of hybrid and electric vehicles.
- To know the various aspects of hybrid and electric drive train such as their configuration, types of electric machines that can be used for energy storage devices, etc.

**Course Outcomes:** After completion of the course, students will be able to:

- Understand the models to describe hybrid electric vehicles and their performance.
- Understand the different possible ways of energy storage.
- Understand the different strategies related to energy storage systems.

**UNIT-I:****INTRODUCTION**

**Conventional Vehicles:** Basics of vehicle performance, Vehicle power source characterization, Transmission characteristics, Mathematical models to describe vehicle performance.

**UNIT-II:****INTRODUCTION TO HYBRID ELECTRIC VEHICLES**

History of hybrid and electric vehicles, Social and environmental importance of hybrid and electric vehicles, Impact of modern drive-trains on energy supplies.

**Hybrid Electric Drive-Trains:** Basic concept of hybrid traction, Introduction to various hybrid drive-train topologies, Power flow control in hybrid drive-train topologies, Fuel efficiency analysis.

**UNIT-III:****ELECTRIC TRAINS**

**Electric Drive-Trains:** Basic concept of electric traction, introduction to various electric drive train topologies, Power flow control in electric drive-train topologies, Fuel efficiency analysis.

**Electric Propulsion Unit:** Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, Configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, Drive system efficiency.

**UNIT-IV:****ENERGY STORAGE**

**Energy Storage:** Introduction to Energy Storage, Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

**Sizing the drive system:** Matching the electric machine and the Internal Combustion Engine (ICE), Sizing the propulsion motor, Sizing the power electronics, Selecting the energy storage technology, Communications, Supporting subsystems.

**UNIT-V:****ENERGY MANAGEMENT STRATEGIES**

**Energy Management Strategies:** Introduction to energy management strategies used in hybrid and electric vehicles, Classification of different energy management strategies, Comparison of different energy management strategies, Implementation issues of energy management strategies.

**Case Studies:** Design of a Hybrid Electric Vehicle (HEV), Design of a Battery Electric Vehicle (BEV).

**TEXT BOOKS:**

**M. Tech – I Semester**

**L T P C**  
**0 0 4 2**

**POWER SYSTEMS COMPUTATION LAB-I**  
**(Laboratory 1)**

**Prerequisite:** Power systems

**Course Objectives:**

- To construct Y-bus, Z-bus for a n-bus system.
- To analyze various Load flow studies.
- To know steady state, transient stability analysis.
- To understand economic load dispatch problem.
- To understand unit commitment problem.
- To understand state estimation of power system.

**Course Outcomes:** After completion of the course, students will be able to:

- Construct Y-bus and Z-bus
  - Compare the different load flow methods
  - Analyze the different stability analysis of variety of power systems
  - Understand Economic load dispatch and Unit commitment problems.
  - Understand State estimation of power system.
1. Develop Program for  $Y_{BUS}$  formation by direct inspection method.
  2. Develop Program for  $Y_{BUS}$  formation by Singular Transformation method.
  3. Develop Program for G-S Load Flow Algorithm.
  4. Develop Program for N-R Load Flow Algorithm in Polar Coordinates.
  5. Develop Program for FDLF Algorithm.
  6. Develop Program for DC load Flow Algorithm.
  7. Develop Program for  $Z_{BUS}$  Building Algorithm.
  8. Develop Program for Short Circuit Analysis using  $Z_{BUS}$  Algorithm.
  9. Develop Program for Transient Stability Analysis for Single Machine connected to Infinite Bus
  10. Develop Program for Economic Load Dispatch Problem using Lambda Iterative Method.
  11. Develop Program for Unit Commitment Problem using Forward Dynamic Programming Method.
  12. Develop Program for State Estimation of Power System.

**Note:** From the above list, minimum of 10 experiments are to be conducted using suitable software.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD****M. Tech – I Semester****L T P C**  
**0 0 4 2****ADVANCED POWER SYSTEMS LAB**  
**(Laboratory 2)****Prerequisite:** Power systems and FACTS**Course Objectives:**

- To determine transmission line parameters
- To determine transmission line regulation and efficiency
- To determine various fault calculations
- To perform load and line compensation

**Course Outcomes:** After completion of the course, students will be able to:

- Calculate transmission line parameters
- Calculate transmission line regulation and efficiency
- Calculate various fault parameters
- Compare system parameters with and with out compensation

1. Determination of Line Parameters R, L and C.
2. Determination of T/L efficiency and Regulation for a given load.
3. Analysis of Ferranti effect on Transmission Lines under light loadings.
4. Determination of ABCD parameters of a given Transmission Line Network.
5. Fault Analysis:
  - a) Single Line to Ground fault (L-G).
  - b) Line to Line fault (L-L).
  - c) Double Line to Ground fault (L-L-G).
  - d) Triple Line to Ground fault (L-L-L-G).
6. Analysis of Uncompensated lines and their voltage profiles.
7. Shunt compensation of Transmission lines (Capacitor/Reactors).
8. Load Compensation analysis.
9. Line Compensation using FACTS devices.
10. Analysis of Transmission lines under Surge Impedance Loading.
11. Determination of Sequence impedance of Transmission Line and SIL analysis.

**RESEARCH METHODOLOGY & IPR  
(MLC)**

**Prerequisite:** None**Course Objectives:**

- To understand the research problem
- To know the literature studies, plagiarism and ethics
- To get the knowledge about technical writing
- To analyze the nature of intellectual property rights and new developments
- To know the patent rights

**Course Outcomes:** After completion of the course, students will be able to:

- Understand research problem formulation.
- Analyze research related information
- Follow research ethics
- Understand that today's world is controlled by Computer, Information Technology, but Tomorrow's world will be ruled by ideas, concept, and creativity.
- Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasize the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
- Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

**UNIT-I:**

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem.

Approaches of investigation of solutions for research problem, Data collection, Analysis, Interpretation, Necessary instrumentations.

**UNIT-II:**

Effective literature studies approaches, Analysis, Plagiarism, Research ethics.

**UNIT-III:**

Effective technical writing, How to write report, Paper Developing a Research Proposal, Format of research proposal, A presentation and assessment by a review committee.

**UNIT-IV:**

**Nature of Intellectual Property:** Patents, Designs, Trade and Copyright.

**Process of Patenting and Development:** Technological research, Innovation, Patenting, Development.

**International Scenario:** International cooperation on Intellectual Property, Procedure for grants of patents, Patenting under PCT.

**UNIT-V:**

**Patent Rights:** Scope of Patent Rights, Licensing and transfer of technology, Patent information and databases, Geographical Indications.

**New Developments in IPR:** Administration of Patent System, New developments in IPR, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

**TEXT BOOKS:**

**DIGITAL PROTECTION OF POWER SYSTEM  
(PC 3)**

**Prerequisite:** Power System Protection**Course Objectives:**

- To study numerical relays.
- To develop mathematical approach towards protection.
- To study algorithms for numerical protection.

**Course Outcomes:** After completion of the course, students will be able to:

- Learn the importance of Digital Relays.
- Apply Mathematical approach towards protection.
- Develop various Protection algorithms.

**UNIT-I:****MATHEMATICAL BACKGROUND TO DIGITAL PROTECTION**

Overview of static relays, Transmission line protection, Transformer protection, Need for Digital protection. Performance and operational characteristics of Digital protection, Basic structure of Digital relays, Finite difference techniques, Interpolation formulas, Numerical differentiation, Curve fitting and smoothing, Fourier analysis, Walsh function analysis, Relationship between Fourier and Walsh coefficients.

**UNIT-II:****BASIC ELEMENTS OF DIGITAL PROTECTION**

Basic components of a digital relay, Signal conditioning subsystems, Conversion subsystem, Digital relay subsystem, The digital relay as a unit.

**UNIT-III:****DIGITAL RELAYING ALGORITHMS-I**

**Sinusoidal-Wave-Based algorithms:** Sample and first-derivative methods, First and second-derivative methods, Two-sample technique, Three-sample technique, An early relaying scheme.

**Fourier analysis based algorithms:** Full cycle window algorithm, Fractional-cycle window algorithms, Fourier-transform based algorithm, Walsh-function-based algorithms.

**UNIT-IV:****DIGITAL RELAYING ALGORITHMS-II**

**Least squares based methods:** Integral LSQ fit, Power series LSQ fit, Multi-variable series LSQ technique, Determination of measured impedance estimates.

**Differential equation based techniques:** Representation of transmission lines with capacitance neglected, Differential equation protection with selected limits, Simultaneous differential equation techniques.

**Travelling-wave based protection:** Fundamentals of Travelling-wave based protection, Bergeron's-equation based protection scheme, Ultra-high-speed polarity comparison scheme, Ultra-high-speed wave differential scheme, Discrimination function based scheme, Superimposed component trajectory based scheme.

**UNIT-V:****DIGITAL PROTECTION OF TRANSFORMERS AND TRANSMISSION LINES**

Principles of transformer protection, Digital protection of Transformer using FIR filter based algorithm, Least squares curve fitting based algorithms, Fourier-based algorithm, Flux-restrained current differential relay.

**Digital Line differential protection:** Current-based differential schemes, Composite voltage- and current-based scheme.

**TEXT BOOKS:**

**POWER SYSTEM DYNAMICS  
(PC 4)**

**Prerequisite:** Power Systems and Electrical Machines**Course Objectives:**

- To develop mathematical models for synchronous machine, Exciter, Governor and Prime mover.
- To study power system dynamic phenomena and the effects of exciter and governor control.
- To improve dynamic stability of a system.

**Course Outcomes:** After completion of the course, students will be able to:

- Understand the modeling of synchronous machine in details
- Understand the modeling of Exciter and Governor control
- Carry out simulation studies of power system dynamics using MATLAB-SIMULINK, MI POWER
- Carry out stability analysis with and without power system stabilizer

**UNIT-I:****POWER SYSTEM STABILITY: A CLASSICAL APPROACH**

Introduction, Requirements of a Reliable Electrical Power Service, Swing Equation, Power-Angle Curve, Stability analysis of SMIB system, Equal area criteria, Classical Model of a Multimachine System, Shortcomings of the Classical Model, Block Diagram of One Machine.

**System Response to Small Disturbances:** Types of Problems Studied, The Unregulated Synchronous Machine, Modes of Oscillation of an Unregulated Multimachine System, Regulated Synchronous Machine.

**UNIT-II:****SYNCHRONOUS MACHINE MODELING-I**

Introduction, Park's Transformation, Flux Linkage Equations, Voltage Equations, Formulation of State-Space Equations, Current Formulation, Per Unit Conversion, Normalizing the Voltage and Torque Equations, Equivalent Circuit of a Synchronous Machine, The Flux Linkage State-Space Model, Load Equations, Sub-transient and Transient Inductances and Time Constants, Simplified Models of the Synchronous Machine, Turbine Generator Dynamic Models.

**UNIT-III:****SYNCHRONOUS MACHINE MODELING-II**

Steady state equations and phasor diagrams, Determining steady state conditions, Evaluation of Initial conditions, Determination of machine parameters, Digital simulation of Synchronous machines, Linearization and Simplified Linear model and state-space representation of simplified model.

**UNIT-IV:****EXCITATION AND PRIME MOVER CONTROL**

Simplified view of excitation control, Control configurations, Typical excitation configurations, Excitation control system definitions, Voltage regulator, Exciter buildup, Excitation system response, State-space description of the excitation system, Computer representation of excitation systems, Typical system constants, and the effects of excitation on generator power limits, Transient stability and dynamic stability of the power system.

**Prime mover control:** Hydraulic turbines and governing systems, Steam turbines and governing systems.

**UNIT-V:****SMALL SIGNAL STABILITY ANALYSIS**

Fundamental concepts of stability of dynamic systems, Eigen properties of the state matrix, Small-signal stability of a single-machine infinite bus system, Effects of excitation system, Power system stabilizer, System state matrix with amortisseurs, Characteristics of small-signal stability problems.

**TEXT BOOKS:**

**RESTRUCTURED POWER SYSTEMS  
(PE III.1)**

**Prerequisite:** Power Systems

**Course Objectives:**

- To understand what is meant by restructuring of the electricity market
- To understand the need behind requirement for deregulation of the electricity market
- To understand the money, power & information flow in a deregulated power system

**Course Outcomes:** After completion of the course, students will be able to:

- Describe various types of regulations in power systems.
- Identify the need of regulation and deregulation.
- Define and describe the Technical and Non-technical issues in Deregulated Power Industry.
- Identify and give examples of existing electricity markets.
- Classify different market mechanisms and summarize the role of various entities in the market.

**UNIT-I:**

Fundamentals of restructured system, Market architecture, Load elasticity, Social welfare maximization.

**UNIT-II:**

**OPF:** Role in vertically integrated systems and in restructured markets, Congestion management.

**UNIT-III:**

Optimal bidding, Risk assessment, Hedging, Transmission pricing, Tracing of power.

**UNIT-IV:**

Ancillary services, Standard market design, Distributed generation in restructured markets.

**UNIT-V:**

Developments in India, IT applications in restructured markets, Working of restructured power systems, PJM, Recent trends in Restructuring.

**TEXT BOOKS:**

1. Lorrin Philipson, H. Lee Willis, “Understanding electric utilities and de-regulation”, Marcel Dekker Pub.,1998.

**EHV AC TRANSMISSION  
(PE III.2)**

**Prerequisite:** Power Systems**Course objectives:**

- To identify the different aspects of Extra High Voltage AC and DC Transmission design and analysis
- To understand the importance of modern developments of EHV and UHV transmission systems.
- To demonstrate EHV AC transmission system components, protection and insulation level for over voltages.

**Course Outcomes:** After completion of the course, students will be able to:

- Understand the importance of EHV AC transmission
- Estimate choice of voltage for transmission, line losses and power handling capability of EHV Transmission.
- Analyse by applying the statistical procedures for line designs, scientific and engineering principles in power systems.

**UNIT- I:**

E.H.V.A.C. Transmission line trends and preliminary aspect standard transmission voltages, Estimation at line and ground parameters, Bundled conductor systems, Inductance and Capacitance of E.H.V. lines, Positive, negative and zero sequence impedance, Line Parameters for Modes of Propagation.

**UNIT- II:**

Electrostatic field and voltage gradients, Calculation of electrostatic field of AC lines, Effect of high electrostatic field on biological organisms and human beings, Surface voltage gradients and maximum gradients of actual transmission lines, Voltage gradients on sub conductor.

**UNIT- III:**

Electrostatic induction in unenergized lines, Measurement of field and voltage gradients for three phase single and double circuit lines, Unenergized lines.

**Power Frequency Voltage control and over-voltages in EHV lines:** No load voltage, Charging currents at power frequency, Voltage control, Shunt and series compensation, Static VAR compensation.

**UNIT - IV:**

Corona in E.H.V. lines, Corona loss formulae, Attention of traveling waves due to Corona, Audio noise due to Corona and its generation, Characteristic and limits.

Measurement of audio noise radio interference due to Corona, Properties of radio noise, Frequency spectrum of RI fields, Measurement of RI and RIV.

**UNIT- V:**

Design of EHV lines based on steady state and transient limits, EHV cables and their characteristics.

**TEXT BOOKS:**

1. R. D. Begamudre, "EHVAC Transmission Engineering, New Age International (p) Ltd., 3<sup>rd</sup> Edition.

**SWARM INTELLIGENCE TECHNIQUES IN POWER SYSTEMS  
(PE III.3)**

**Prerequisite:** Artificial Intelligence Techniques in Electrical Engineering**Course Objectives:**

- To understand Evolutionary algorithms like GA, PSO, ANT COLONY and BEE COLONY etc.
- To apply these Evolutionary algorithms to solve power systems problems
- To also able to understand solution of Multi-Objective optimization using these algorithms

**Course Outcomes:** After completion of the course, students will be able to:

- Discriminate the capabilities of bio-inspired system and conventional methods in solving optimization problems.
- Examine the importance of exploration and exploitation of swarm intelligent system to attain near global optimal solution.
- Distinguish the functioning of various swarm intelligent systems.
- Employ various bio-inspired algorithms for power systems engineering applications.

**UNIT-I:****FUNDAMENTALS OF SOFT COMPUTING TECHNIQUES**

Definition, Classification of optimization problems, Unconstrained and constrained optimization optimality condition, Introduction to intelligent systems, Soft computing techniques, Conventional computing versus swarm computing, Classification of meta-heuristic techniques, Single solution based and population based algorithms, Exploitation and exploration in population based algorithms, Properties of Swarm intelligent Systems, Application domain, Discrete and continuous problems, Single objective and multi-objective problems.

**UNIT-II:****GENETIC ALGORITHM & PARTICLE SWARM OPTIMIZATION**

Genetic algorithms, Genetic algorithm versus Conventional Optimization Techniques, Genetic representations and selection mechanisms: Genetic operators, Different types of crossover and mutation operators, Bird flocking and Fish Schooling-anatomy of a particle, Equations based on velocity and positions, PSO topologies, Control parameters, GA and PSO algorithms for solving ELD problems.

**UNIT-III:****ANT COLONY OPTIMIZATION & ARTIFICIAL BEE COLONY ALGORITHMS**

Biological ant colony system, Artificial ants and assumptions, Stigmergic communications, Pheromone updating, Local-global-pheromone evaporation, Ant colony system, ACO models, Touring ant colony system, Max min ant system, Concept of elastic ants, Task partitioning in honey bees, Balancing foragers and receivers, Artificial bee colony (ABC) algorithms, Binary ABC algorithms, ACO and ABC algorithms for solving Economic Dispatch of thermal units.

**UNIT-IV:****SHUFFLED FROG-LEAPING ALGORITHM & BAT OPTIMIZATION ALGORITHM**

Bat algorithm, Echolocation of bats, Behaviour of micro bats, Acoustics of echolocation, Movement of Virtual bats, Loudness and pulse Emission, Shuffled frog algorithm, Virtual population of frogs, Comparison of memes and genes, Memplex formation, Memplex updation, BA and SFLA algorithms for solving ELD and optimal placement and sizing of the DG problem.

**UNIT-V:****MULTI OBJECTIVE OPTIMIZATION**

Multi-Objective optimization introduction, Concept of pareto optimality, Non-dominant sorting technique, Pareto fronts, Best compromise solution, Min-max method, NSGA-II algorithm and applications to power systems.

**TEXT BOOKS:**

**INDUSTRIAL LOAD MODELLING AND CONTROL  
(PE III.4)**

**Prerequisite:** Power Systems**Course Objectives:**

- To understand the energy demand scenario
- To understand the modeling of load and its ease to study load demand industrially
- To know electricity pricing models
- To study reactive power management in Industries

**Course Outcomes:** After completion of the course, students will be able to:

- Acquire knowledge about load control techniques in industries and its application.
- Understand different types of industrial processes and optimize the process using tools like LINDO and LINGO.
- Apply load management to reduce demand of electricity during peak time.
- Apply different energy saving opportunities in industries.

**UNIT-I:**

Electric Energy Scenario, Demand Side Management, Industrial Load Management. Load Curve, Load Shaping Objective, Methodologies.

Barriers: Classification of Industrial Loads, Continuous and Batch processes, Load Modeling.

**UNIT-II:**

Direct load control, Interruptible load control. Bottom up approach, Scheduling, Formulation of loadmodels, Optimization and control algorithms, Case studies. Reactive power management in industry, Controls, Power quality impacts, Application of filters, Energy saving in industries.

**UNIT-III:**

Cooling and heating loads, Load profiling, Modeling. Cool storage, Types, Control strategies. Optimal operation, Problem formulation, Case studies.

**UNIT-IV:**

Captive power units, Operating and control strategies, Power Pooling, Operation models. Energy banking, Industrial Cogeneration.

**UNIT-V:**

Selection of Schemes, Optimal Operating Strategies. Peak load saving, Constraints, Problem formulation Case study. Integrated Load management for Industries.

**AI TECHNIQUES IN POWER SYSTEMS  
(PE IV.1)****Prerequisite:** Artificial Intelligence Techniques in Electrical Engineering**Course Objectives:**

- To understand fuzzy logic, Artificial Neural Networks
- To understanding Genetic Algorithms & Evolutionary Programming

**Course Outcomes:** After completion of the course, students will be able to:

- Learn the concepts of biological foundations of artificial neural networks
- Learn Feedback networks and radial basis function networks and fuzzy logics
- Identify fuzzy and neural network
- Acquire the knowledge of Genetic Algorithms

**UNIT-I:**

Biological foundations to intelligent Systems, Artificial Neural Networks, Single layer and Multilayer Feed Forward NN, LMS and Back Propagation Algorithm, Feedback networks and Radial Basis Function Networks.

**UNIT-II:**

Fuzzy Logic, Knowledge Representation and Inference Mechanism, Defuzzification Methods. Fuzzy Neural Networks and their learning methods.

**UNIT-III:**

System Identification using Fuzzy and Neural Network.

**UNIT-IV:**

Genetic algorithm, Reproduction cross over, Mutation, Introduction to evolutionary program.

**UNIT-V:**

Applications of above mentioned techniques to practical problems.

**TEXT BOOKS:**

**POWER QUALITY IMPROVEMENT TECHNIQUES  
(PE IV.2)**

**Prerequisite:** Power Systems and Power Electronics**Course Objectives:**

- To know different terms of power quality.
- To illustrate power quality issues for short and long interruptions.
- To study characterization of voltage sag magnitude and three phase unbalanced voltage sag.
- To know the behavior of power electronic loads, induction motors, synchronous motor etc. by the power quality issues
- To know mitigation of power quality problems by using VSI converters.

**Course Outcomes:** After completion of the course, students will be able to:

- Know the severity of power quality problems in distribution system
- Understand the concept of voltage sag transformation from up-stream (higher voltages) to down-stream (lower voltage)
- Compute the power quality improvement by using various mitigating custom power devices.

**UNIT-I:****INTRODUCTION AND POWER QUALITY STANDARDS**

Introduction, Classification of Power Quality Problems, Causes, Effects and Mitigation Techniques of Power Quality Problems, Power Quality Terminology, Standards, Definitions, Monitoring and Numerical Problems.

**UNIT-II:****CAUSES OF POWER QUALITY PROBLEMS**

Introduction to Non-Linear Loads, Power Quality Problems caused by Non-Linear Loads, Analysis of Non-Linear Loads, Numerical Problems.

**UNIT-III:****PASSIVE SHUNT AND SERIES COMPENSATION**

Introduction, Classification and Principle of operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators for Single-Phase System, Three-Phase Three Wire System and Three-Phase Four Wire System.

**UNIT-IV:****ACTIVE SHUNT AND SERIES COMPENSATION**

**Introduction to Shunt compensators:** Classification of DSTATCOM's, Principle of Operation of DSTATCOM.

**Different Control Algorithms of DSTATCOM:** PI Controller, I Cos $\phi$  Control Algorithm, Synchronous Reference Frame Theory, Single-Phase PQ theory and DQ Theory Based Control Algorithms, Analysis and Design of Shunt Compensators, Numerical Problems.

**Introduction to Series Compensators:** Classification of Series Compensators, Principle of Operation of DVR.

**Different Control Algorithms of DVR:** Synchronous Reference Frame Theory-Based Control of DVR, Analysis and Design of Active Series Compensators, Numerical Problems.

**UNIT-V:**

**UNIFIED POWER QUALITY COMPENSATORS**

Introduction to Unified Power Quality Compensators (UPQC), Classification of UPQC's, Principle of Operation of UPQC.

**Control of UPQCs:** Synchronous Reference Frame Theory-Based UPQC, Analysis and Design of UPQCs, Numerical Problems.

**TEXT BOOKS:**

**POWER APPARATUS DESIGN  
(PE IV.3)**

**Prerequisite:** Electrical Machines**Course Objectives:**

- To study the modelling analysis of rotating machine.
- To learn electromagnetic energy conversion
- To know about rating of machines.

**Course Outcomes:** After completion of the course, students will be able to:

- Give a systematic approach for modeling and analysis of all rotating machines under both transient and steady state conditions with the dimensions and material used.
- Model and design all types of rotation machines including special machines.

**UNIT-I:**

Principles of Design of Machines, Specific loadings, Choice of magnetic and electric loadings, Real and apparent flux densities, temperature rise calculation, Separation of main dimension for DC machines, Induction machines and synchronous machines, Design of Transformers, General considerations, Output equation, Emf per turn, Choice of flux density and current density, Main dimensions, Leakage reactance and conductor size, Design of tank and cooling.

**UNIT-II:**

Specific loadings, Choice of magnetic and electric loadings, Real and apparent flux densities, Temperature rise calculation, Separation of main dimension for DC machines, Induction machines and synchronous machines, Heating and cooling of machines, Types of ventilation, Continuous and intermittent rating.

**UNIT-III:**

General considerations, Output equation, Emf per turn, Choice of flux density and current density, Main dimensions, Leakage reactance and conductor size, Design of tank and cooling tubes, Calculation of losses, Efficiency and regulation, Forces winding during short circuit.

**UNIT-IV:**

General considerations, Output equation, Choice of specific electric and magnetic loadings, Efficiency, Power factor, Number of slots in stator and rotor, Elimination of harmonic torques.

**UNIT-V:**

Design of stator and rotor winding, Slot leakage flux, Leakage reactance, Equivalent resistance of squirrel cage rotor, Magnetizing current, Efficiency from design data. Types of alternators, Comparison, Specific loadings, Output co-efficient, Design of main dimensions. Introduction to Computer Aided Electrical Machine Design Energy efficient machines.

**POWER SYSTEM RELIABILITY AND PLANNING**  
(PE IV.4)

**Prerequisite:** Reliability Engineering**Course Objectives:**

- To describe the generation system model and recursive relation for capacitive model building
- To explain the equivalent transitional rates, cumulative probability and cumulative frequency
- To develop the understanding of risk, system and load point reliability indices
- To explain the basic and performance reliability indices

**Course Outcomes:** After completion of the course, students will be able to:

- Understand the importance of maintaining reliability of power system components.
- Apply the probabilistic methods for evaluating the reliability of generation and transmission systems.
- Assess the different models of system components in reliability studies.
- Assess the reliability of single area and multi area systems.

**UNIT-I:****BASIC RELIABILITY CONCEPTS:**

The general reliability function, The exponential distribution, Mean time to failures, Series and parallel systems. Markov process, Continuous Markov process, Recursive techniques, Simple series and parallel system models.

**UNIT-II:****GENERATING CAPACITY – BASIC PROBABILITY METHODS:**

The generation system model, Loss of load indices, Capacity expansion analysis, Scheduled outages, Load forecast uncertainty, Loss of energy indices, The frequency and duration method.

**UNIT-III:****TRANSMISSION SYSTEMS RELIABILITY EVALUATION:**

Radial configuration, Conditional probability approach, Network configurations, State selection.

**UNIT-IV:****GENERATION PLANNING:**

Comparative economic assessment of individual generation projects, Investigation and simulation models, Heuristic and linear programming models, Probabilistic generator and load models.

**UNIT-V:****TRANSMISSION AND DISTRIBUTION PLANNING:**

Deterministic contingency analysis, Probabilistic transmission system, Reliability analysis. Reliability calculations for single area and multi-area power systems. Network configuration design consisting of schemes, Security criteria configuration synthesis.

**TEXT BOOKS:**

1. Roy Billinton and Ronald Allan Pitam, "Reliability Evaluation of Power Systems", 1996.
2. R.L. Sullivan, "Power System Planning", McGraw Hill International, 1977.

**M. Tech – II Semester**

**L T P C**  
**0 0 4 2**

**POWER SYSTEMS COMPUTATION LAB-II**  
**(Laboratory 3)**

**Prerequisite:** Power Systems and Artificial Neural Networks

**Course Objectives:**

- To know Neural network tool box
- To know the various Evolutionary Algorithms
- To apply various Evolutionary Algorithms to power system problems

**Course Outcomes:** After completion of the course, students will be able to:

- Understood Neural network and fuzzy logic tool box
- Understood various Evolutionary Algorithms
- Solve power system problems by applying various Evolutionary Algorithms

**List of Experiments:**

1. Load Flow analysis using Neural Network
2. State Estimation using Neural Network
3. Contingency Analysis using Neural Network
4. Power system Security using Neural Network
5. Fuzzy Logic based AGC – Single area system – Two area system
6. Fuzzy Logic based small signal stability analysis
7. Economic Dispatch of Thermal Units using ANN
8. Economic Dispatch of Thermal Units using GA
9. Unit commitment problem by using GA
10. Unit commitment problem by using PSO
11. Optimal location and sizing of capacitor in distribution system using PSO
12. Security constrained optimal power dispatch using GA
13. Optimal Reactive power dispatch using PSO

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD**

**M. Tech – II Semester**

**L T P C**  
**0 0 4 2**

**POWER SYSTEM PROTECTION LAB**  
**(Laboratory 4)**

**Prerequisite:** Power System Protection

**Course Objectives:**

- To understand practically different types of Faults occurring in power systems
- To study the characteristics of different types of relays
- To apply different protection schemes and understand the principle of operation

**Course Outcomes:** After completion of the course, students will be able to:

- Calculate various faults
- Analyze the various time-current characteristics of protective relays
- Know the Performance and Testing of various electrical models and systems

**List of Experiments:**

1. Characteristics of Electromechanical Non-Directional over current relay
2. Characteristics of Electromechanical Directional Over Current Relay
3. Characteristics of Electromechanical differential protection relay
4. Characteristics of Numerical Distance relay
5. Characteristics of Integrated Numerical under Voltage Relay
6. Characteristics of Numerical over current Relay
7. Zones protection characteristics of distance Relay
8. Differential protection on Single Phase Transformer
9. Performance and Testing of Feeder Protection System
10. Performance and Testing of Generator Protection System.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD****M. Tech – III Semester****L T P C**  
**3 0 0 3****POWER SYSTEM TRANSIENTS**  
**(PE V.1)****Prerequisite:** Power Systems**Course Objectives:**

- To learn the reasons for occurrence of transients in a power system.
- To understand the change in parameters like voltage & frequency during transients.
- To know about the lightning phenomenon and its effect on power system.

**Course Outcomes:** After completion of the course, students will be able to:

- Get knowledge of various transients that could occur in power system and their mathematical formulation.
- Design various protective devices in power system for protecting equipment and Personnel.
- Coordinate the insulation of various equipments in power system.
- Model the power system for transient analysis.

**UNIT-I:**

Fundamental circuit analysis of electrical transients, Laplace Transform method of solving simple Switching transients, Damping circuits, Abnormal switching transients, Three-phase circuits and transients, Computation of power system transients.

**UNIT-II:**

Principle of digital computation, Matrix method of solution, Modal analysis, Z-transform, Computation using EMTP, Lightning, Switching and temporary over voltages, Lightning, Physical phenomena of lightning.

**UNIT-III:**

Interaction between lightning and power system, Influence of tower footing resistance and Earth Resistance, Switching, Short line or kilometric fault, Energizing transients, Closing and re-closing of lines, Line dropping, Load rejection, Over voltages induced by faults.

**UNIT-IV:**

Switching HVDC line, Travelling waves on transmission line, Circuits with distributed Parameters, Wave Equation, Reflection, Refraction, Behaviour of Travelling waves at the lineTerminations, Lattice Diagrams, Attenuation and Distortion factors, Multi-conductor system and Velocity wave.

**UNIT-V:**

Insulation co-ordination: Principle of insulation co-ordination in Air Insulated Substation (AIS) and Gas Insulated Substation (GIS), Coordination between insulation and protection level, Statistical approach. Protective devices, Protection of system against over voltages, Lightning arresters, Substation earthing.

**TEXT BOOKS:**

1. Allan Greenwood, "Electrical Transients in Power System", Wiley & Sons Inc., New York, 1991.
2. Harold A Peterson, "Transient in Power Systems", McGraw Hill, 1966.

**REFERENCES:**

1. Kuffel and Abdullah, "High Voltage Engineering", PHI, 2000.
2. Rakesh D. Begamudre, "EHV AC Transmission Engineering", PHI, 2006.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD****M. Tech – III Semester****L T P C**  
**3 0 0 3****FLEXIBLE AC TRANSMISSION SYSTEMS**  
**(PE V.2)****Prerequisite:** Power Electronics and Power Systems**Course Objectives:**

- To understand uncompensated lines and their behavior under heavy loading conditions.
- To understand the concept and importance of controllable parameters of FACTS controllers.
- To emphasize the objectives of Shunt compensation and basic operation of SVC and STATCOM.
- To analyze the functioning of series controllers like GCSC, TSSC and TCSC

**Course Outcomes:** After completion of the course, students will be able to:

- Choose proper controller for the specific application based on system requirements
- Understand various systems thoroughly and their requirements
- Interpret the control circuits of Shunt Controllers SVC & STATCOM for various functions viz. Transient stability Enhancement, voltage instability prevention and power oscillation damping
- Detect the Power and control circuits of Series Controllers GCSC, TSSC and TCSC

**UNIT-I:****FACTS CONCEPTS**

Transmission interconnections power flow in an AC system, Loading capability limits, Dynamic stability considerations, Importance of controllable parameters basic types of FACTS controllers, Benefits from FACTS controllers.

**UNIT-II:****VOLTAGE SOURCE CONVERTERS**

Single phase & three phase full wave bridge converters, Transformer connections for 12 pulse, 24 and 48 pulse operation. Three level voltage source converter, Pulse width modulation converter, Basic concept of current source Converters, Comparison of current source converters with voltage source converters.

**UNIT-III:****STATIC SHUNT COMPENSATION**

Objectives of shunt compensation, Mid-point voltage regulation, Voltage instability prevention, Improvement of transient stability, Power oscillation damping, Methods of controllable VAR generation, Variable impedance type static VAR generators switching converter type VAR generators, Hybrid VAR generators.

**UNIT-IV:****SVC AND STATCOM**

The regulation and slope transfer function and dynamic performance, Transient stability enhancement and power oscillation damping operating point control and summary of compensator control.

**UNIT-V:****STATIC SERIES COMPENSATORS**

Concept of series capacitive compensation, Improvement of transient stability, Power oscillation damping and functional requirements of GTO thyristor controlled series capacitor (GSC), Thyristor switched series capacitor (TSSC) and thyristor controlled series capacitor (TCSC). Control schemes for GSC, TSSC and TCSC.

**TEXT BOOKS:**

**GAS INSULATED SYSTEMS  
(PE V.3)**

**Prerequisite:** Switch Gear and Protection**Course objectives:**

- To know the GIS concepts and principles
- To distinguish Air Insulated and Gas insulated Substations
- To demonstrate the design and constructional aspects of GIS
- To analyze transient phenomenon, problems and diagnostic methods in GIS

**Course Outcomes:** After completion of the course, students will be able to:

- Know the advantages of GIS systems over air insulated systems
- Observe constructional design features of GIS design
- Discriminate the problems and design diagnostic methods of GIS

**UNIT-I:****INTRODUCTION TO GIS AND PROPERTIES OF SF<sub>6</sub>**

Characteristics of GIS- Introduction to SF<sub>6</sub>, Physical properties, Chemical properties, Electrical properties, Specification of SF<sub>6</sub> gas for GIS application, Handling of SF<sub>6</sub> gas before use, Safe handling of SF<sub>6</sub> gas in electrical equipment, Equipment for handling the SF<sub>6</sub> Gas, SF<sub>6</sub> and environment.

**UNIT-II:****LAYOUT OF GIS STATIONS**

Advancement of GIS station, Comparison with Air Insulated Substation, Economics of GIS, User Requirements for GIS, Main Features for GIS, Planning and Installation components of a GIS station.

**UNIT-III:****DESIGN AND CONSTRUCTION OF GIS STATION**

Introduction, Rating of GIS components, Design Features, Estimation of different types of Electrical Stresses, Design Aspects of GIS components, Insulation Design for Components, Insulation Design for GIS, Thermal Considerations in the Design of GIS, Effect of Very Fast Transient Over-voltages (VFTO) on the GIS design, Insulation Coordination systems, Gas handling and Monitoring System Design.

**UNIT-IV:****FAST TRANSIENT PHENOMENA IN GIS**

Introduction, Disconnecter Switching in Relation to Very fast Transients-Origin of VFTO, Propagation and Mechanism of VFTO, VFTO Characteristics, Effects of VFTO, Testing of GIS for VFTO.

**UNIT-V:****SPECIAL PROBLEMS IN GIS AND GIS DIAGNOSTICS**

Introduction, Particles their effects and their control, Insulating Spacers and their Reliability, SF<sub>6</sub> Gas Decomposition, Characteristics of imperfections in insulation, Insulation Diagnostic methods, PD Measurement and UHF Method.

**TEXT BOOKS:**

1. M. S. Naidu, "Gas Insulated Substations", IK International Publishing House.
2. Hermann J. Koch, "Gas Insulated Substations", Wiley-IEEE Press, Jun, 2014.

**SCADA SYSTEM AND APPLICATIONS  
(PE V.4)**

**Prerequisite:** None**Course Objectives:**

- To understand what is meant by SCADA and its functions.
- To know SCADA communication.
- To get an insight into its application.

**Course Outcomes:** After completion of the course, students will be able to:

- Describe the basic tasks of Supervisory Control Systems (SCADA) as well as their typical Applications.
- Acquire knowledge about SCADA architecture, various advantages and disadvantages of each System.
- Acquire knowledge about single unified standard architecture IEC 61850.
- Learn about SCADA system components like remote terminal units, PLCs, intelligent electronic devices, HMI systems, SCADA server.
- Learn and understand about SCADA applications in transmission and distribution sector, industries etc.

**UNIT-I:**

Introduction to SCADA, Data acquisition systems, Evolution of SCADA, Communication technologies. Monitoring and supervisory functions, SCADA applications in utility Automation, Industries SCADA.

**UNIT-II:**

Industries SCADA System Components, Schemes, Remote Terminal Unit (RTU), Intelligent Electronic Devices (IED), Programmable Logic Controller (PLC), Communication Network, SCADA Server, SCADA/HMI Systems.

**UNIT-III:**

SCADA Architecture, Various SCADA architectures, Advantages and disadvantages of each System, Single unified standard architecture - IEC 61850.

**UNIT-IV:**

SCADA Communication, Various industrial communication technologies, Wired and wireless methods and fiber optics, Open standard communication protocols.

**UNIT-V:**

SCADA Applications: Utility applications, Transmission and Distribution sector operations, Monitoring, analysis and improvement. Oil, gas and water industries case studies: Implementation, Simulation exercises.

**TEXT BOOKS:**

1. Stuart A. Boyer, "SCADA-Supervisory Control and Data Acquisition", Instrument Society of America Publications, USA, 2004.
2. Gordon Clarke, Deon Reynders, "Practical Modern SCADA Protocols: DNP3, 60870.5 and Related Systems", Newnes Publications, Oxford, UK, 2004.

**BUSINESS ANALYTICS  
(OEC)****Prerequisite:** None**Course objectives:**

- To understand the role of business analytics within an organization.
- To analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
- To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making.
- To become familiar with processes needed to develop, report, and analyze business data.
- To use decision-making tools/Operations research techniques.
- To Manage business process using analytical and management tools.
- To analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

**Course Outcomes:** After completion of the course, students will be able to:

- Demonstrate knowledge of data analytics.
- Demonstrate the ability of think critically in making decisions based on data and deep analytics.
- Demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making.
- Demonstrate the ability to translate data into clear, actionable insights.

**UNIT-I:**

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

**UNIT-II:**

Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

**UNIT-III:**

Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

**UNIT-IV:**

Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

**UNIT-V:**

Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making. Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

**TEXT BOOKS:**

1. "Business analytics Principles, Concepts, and Applications" by Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, Pearson FT Press.
2. "Business Analytics by James Evans", Pearson's Education.

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD****M. Tech – III Semester**

**INDUSTRIAL SAFETY  
(OEC)**

**Prerequisite:** None**UNIT-I:**

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

**UNIT-II:**

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

**UNIT-III:**

Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

**UNIT-IV:**

Fault tracing: Fault tracing-concept and importance, decision treeconcept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic,automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

**UNIT-V:**

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

**TEXT BOOKS/ REFERENCES:**

**OPERATIONS RESEARCH  
(OEC)**

**Prerequisite:** None**Course Outcomes:** After completion of the course, students will be able to:

- Apply the dynamic programming to solve problems of discrete and continuous variables.
- Apply the concept of non-linear programming
- Carry out sensitivity analysis
- Model the real world problem and simulate it.

**UNIT-I:**

Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

**UNIT-II:**

Formulation of a LPP - Graphical solution revised simplex method - duality theory – dual simplex method - sensitivity analysis - parametric programming

**UNIT-III:**

Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem – max flow problem - CPM/PERT

**UNIT-IV:**

Scheduling and sequencing - single server and multiple server models – deterministic inventory models - Probabilistic inventory control models - Geometric Programming.

**UNIT-V:**

Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

**TEXT BOOKS/ REFERENCES:**

**COST MANAGEMENT OF ENGINEERING PROJECTS  
(OEC)**

**Prerequisite:** None**UNIT-I:**

Introduction and Overview of the Strategic Cost Management Process Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

**UNIT-II:**

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

**UNIT-III:**

Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints.

**UNIT-IV:**

Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

**UNIT-V:**

Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

**TEXT BOOKS/ REFERENCES:**

1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi

**COMPOSITE MATERIALS  
(OEC)**

**Prerequisite:** None**UNIT-I:**

**INTRODUCTION:** Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

**UNIT – II:**

**REINFORCEMENTS:** Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

**UNIT – III:**

**Manufacturing of Metal Matrix Composites:** Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. **Manufacturing of Ceramic Matrix Composites:** Liquid Metal Infiltration – Liquid phase sintering. **Manufacturing of Carbon – Carbon composites:** Knitting, Braiding, Weaving. Properties and applications.

**UNIT-IV:**

**Manufacturing of Polymer Matrix Composites:** Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

**UNIT – V:**

**Strength:** Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

**TEXT BOOKS/ REFERENCES:**

**PHOTOVOLTAIC SYSTEMS  
(OEC)**

**Prerequisite:** None**Course Objectives:**

- To introduce photovoltaic systems
- To deal with various technologies of solar PV cells
- To understand details about manufacture, sizing and operating techniques
- To have knowledge of design considerations.

**Course Outcomes:** After completion of the course, students will be able to:

- Identify photovoltaic system components and system types
- Calculate electrical energy and power
- Correctly size system components, design considerations of solar equipment
- Design a basic grid-tie PV system.

**UNIT-I:****SOLAR ENERGY**

Sun and Earth, Solar Spectrum, Solar Geometry, Solar radiation on horizontal and inclined planes, Instruments for measurement of solar radiation, Solar cell, Equivalent circuit, V-I characteristics, Performance improvement.

**UNIT-II:****SOLAR CELLS**

Manufacture of Solar Cells-Technologies, Design of Solar cells, Photovoltaic modules, Design requirements, Encapsulation systems, Manufacture, Power rating, Hotspot effect, Design qualifications.

**UNIT-III:****PROTECTION AND MEASUREMENTS**

Flat plate arrays, Support structures, Module interconnection and cabling, Lightning protection, Performance measurement using natural sun light and simulator, Determination of temperature coefficients, Internal series resistance, Curve correction factor.

**UNIT-IV:****PHOTOVOLTAIC SYSTEMS**

Photovoltaic systems, Types, General design considerations, System sizing, Battery sizing, Inverter sizing, Design examples, Balance of PV systems.

**UNIT-V:****MAXIMUM POWER POINT TRACKERS**

Maximum power point trackers, Perturb and observe, Incremental conductance method, Hill climbing method, Hybrid and complex methods, Data based and other approximate methods, Instrument design, Other MPP techniques, Grid interactive PV system.

**TEXT BOOKS:**

1. F.C.Treble, "Generating electricity from Sun", Pergamon Press.

**ENGLISH FOR RESEARCH PAPER WRITING**  
**(Audit-I &II .1)**

**Prerequisite:** None

**Course objectives:**

- To Understand that how to improve your writing skills and level of readability
- To Learn about what to write in each section
- To Understand the skills needed when writing a Title Ensure the good quality of paper at very first-time submission

**UNIT-I:**

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

**UNIT-II:**

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticising, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

**UNIT-III:**

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

**UNIT-IV:**

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

**UNIT-V:**

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

**UNIT-VI:**

Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

**TEXT BOOKS/ REFERENCES:**

**DISASTER MANAGEMENT  
(Audit-I &II .2)**

**Prerequisite:** None

**Course Objectives:**

- To learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- To evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- To develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- To understand the strengths and weaknesses of disaster management approaches,
- To plan and program in different countries, particularly their home country or the countries they work

**UNIT-I:**

**Introduction:**

Disaster: Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.

**UNIT-II:**

**Repercussions Of Disasters And Hazards:**

Economic Damage, Loss Of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

**UNIT-III:**

**Disaster Prone Areas In India:**

Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics

**UNIT-IV:**

**Disaster Preparedness And Management:**

Preparedness: Monitoring Of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

**UNIT-V:**

**Risk Assessment Disaster Risk:**

Concept And Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co- Operation In Risk Assessment And Warning, People's Participation In Risk Assessment. Strategies for Survival.

**UNIT-VI:**

**Disaster Mitigation:**

Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

**TEXT BOOKS/ REFERENCES:**

1. R. Nishith, Singh AK, “Disaster Management in India: Perspectives, issues and strategies”, New Royal book Company.

**SANSKRIT FOR TECHNICAL KNOWLEDGE**

**(Audit-I &II .3)**

**Prerequisite:** None

**Course Objectives:**

- To get a working knowledge in illustrious Sanskrit, the scientific language in the world
- To learn of Sanskrit to improve brain functioning
- To Learn of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power
- To equip engineering scholars with Sanskrit will be able to explore the huge knowledge from ancient literature

**Course Outcomes:** After completion of the course, students will be able to:

- Understand basic Sanskrit language
- Know ancient Sanskrit literature about science & technology can be understood
- Get logical language will help to develop logic in students

**UNIT-I:**

Alphabets in Sanskrit,
